

What is unique about our product/equipment?

- Proprietary logic/microcontroller is the brain of the system
 - Basis for patent pending Danolyte Solution
 - Creates competitive advantage and potential exclusivity to markets
 - Protects against duplication
 - Creates barrier to entry for competitors
- Full automation
 - Takes reading every millisecond and adjusts continuously
 - Reduces labor cost - eliminates constant manual adjustment
 - Precision control of output – diverts to waste as necessary
 - E-mails maintenance staff when user intervention is required
 - Reduces labor cost by eliminating operator monitoring
- System design and components optimized
 - Operate on 110V and uses energy saving valves
 - Reduces heat to prolong useful life
 - Reduced energy cost - roughly 30% less than other generators
 - Efficient proprietary electrolytic cell block requires less current and salt
 - Reduces input cost by as much as 35%
- Remote control and monitoring
 - Provides ability to troubleshoot and perform maintenance remotely
 - Reduces labor and associated travel cost to enhances maintenance agreement margins

Automation and Optimization sets our equipment apart
