

Advanced Marine Sanitation for Tight Spaces

SCIENCO/FAST
a subsidiary of BioMicrobics, Inc.

Marine FAST

SLIDE-IN™ SYSTEMS

Designed for Vessels Where Every Inch Matters

Complies with USCG standards

Reliable performance for the life of the vessel

*Tested with USCG protocol and certified to
USCG, IMO, MARPOL, MEPC & ABC standards*

Advanced Marine Wastewater Treatment
WORKBOATS • SHIPS

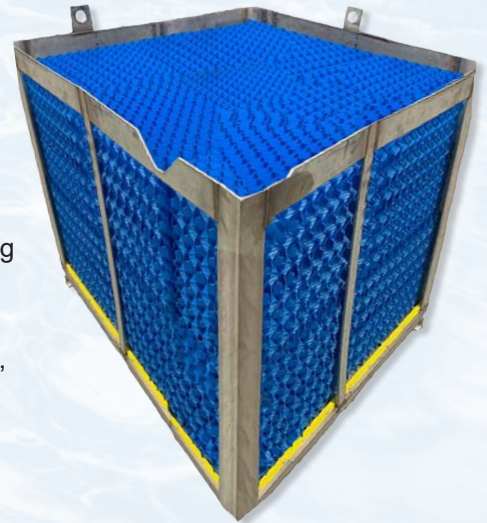

BETTER WATER. BETTER WORLD.®

www.sciencofast.com

Built specifically for vessels with restricted space, the MSD Slide-In™ provides a smarter, more serviceable sanitation solution without compromising reliability or regulatory compliance.

Key Benefits

- **Slide-In and Drop-In Rail System**
Integrated rails allow the MSD to easily slide into place during installation and slide out for inspection or service—ideal for compartments with minimal space for standalone systems.
- **Simplified Maintenance**
Technicians can access the unit quickly without disassembling surrounding equipment, reducing downtime and labor costs.
- **Proven SciencoFAST Technology**
Utilizes the same advanced treatment process trusted across commercial, passenger, and military vessels worldwide.
- **Compact & Efficient Design**
Maximizes available space while maintaining the treatment performance required for modern marine sanitation systems.

How It Works

The **SciencoFAST MSD Slide-In** mounts on a durable rail platform into your ship's existing hull tanks. Instead of lifting the unit vertically for installation or service, operators simply slide the MSD forward along the rails for full access to key components.

This design:

- Uses existing ship's tanks
- Saves floor space
- Improves technician safety
- Utilizes existing tanks
- Reduces installation complexity in tight compartments

Built on SciencoFAST Reliability

SciencoFAST systems are known for their durability, performance, and compliance with marine sanitation standards. The **MSD Slide-In** maintains the same trusted treatment technology while introducing a smarter installation approach for challenging vessel layouts.

Key Advantages at a Glance

- Rail-mounted slide-in MSD installation
- Easier service and inspection access
- Reduced installation time
- Proven SciencoFAST treatment performance
- Ideal for new builds and retrofit

Ideal Applications

- Passenger vessels
- Ferries
- Research vessels
- Workboats
- Retrofits of older vessels with tight equipment rooms
- Custom vessel designs with compact mechanical spaces
